

Amplifai Health

Headquarters: Saudi Arabia (present in 4 countries)

Sector: AI Diagnostics / Digital Health / Sports Tech

Stage & Funding Type: Seed/ Pre A

Problem: Early warning signs of complications like inflammation and poor circulation often go unnoticed — leading to amputations in diabetics and injuries in athletes. Current detection methods are reactive, inconsistent, and hard to scale, resulting in billions in preventable healthcare costs and lost performance.

Solution: Amplifai transforms thermal imaging into an AI-powered diagnostic layer that enables fast, contactless, and objective risk detection — across hospitals, public health settings, homecare, and elite sports. We turn heat into a vital sign, helping clinicians intervene early, reduce costs, and improve outcomes at scale.

Market Opportunity: \$138 billion/year spent in the U.S. alone on diabetic foot-related complications. Amplifai targets two fast-growing segments: diabetic foot prevention and sports medicine. Combined, these markets represent a \$250B in preventable costs and 25 Bn in addressable markets, with increasing demand for AI-powered, non-invasive diagnostics that can scale across clinical and performance settings.

Traction:

- First software as a medical device to be developed in MENA. First of its kind globally. Approved by Saudi FDA, UAE, Bahrain, and soon the USA.
- Actively deployed in hospitals and clinics, with access to the world's largest thermal dataset for diabetic foot. Supported by multiple clinical trials.
- Received non-dilutive funding to develop a sports medicine application using the same core technology, now being piloted by leading football clubs.

Snapshot of Lead / Notable Investors:

- Techstars, Plug and Play, Aramco (Waed) and KAUST. Recognition from google health AI and the Top health innovation in the G20 (2025).

Team: Dr. Meshari Alwashmi, Eng. Mustafa Alghali, Maissa Almagati with leadership in clinical, sports, thermography, regulatory and AI Experience.
